

## Runtime map manager

### 2.1. Draw links

Infos : To reduce memory dump, it's not necessary to « draw » the line but to compute them.

### 1. Ressources list infos

### 2. Establish link map

Destroy or create link

### 2.1. Draw links

### 2.2. Sort Links

### 2.3. Destroy un-necessary links

### 2.2. Sort Links

### 2.3. Destroy un-necessary link

- Un-necessary link => Contact link have higher priority than Distance link. Delete low priority links

- Yellow is link by distance to all other objects.
- The others objects keep only the contact links
- Literal translation of this : yellow can fire at all the others objects. The others object can only attack at the object they are linked to.

### 2.3. Destroy un-necessary link – Variant

- Yellow is no longer linked to all object by distance because purple approached and a contact link have been created, destroying the distance ones.
